

Clinical partnership & risk mitigation

Omnicare[®]
a  **CVS**Health.com company

Our industry-leading consultant pharmacists are dedicated to providing clinical support that's customized to the individual needs of your facility and staff.

Consultant pharmacists

Omnicare Consultant Pharmacists are valued members of a facility's interdisciplinary team, helping them to achieve optimal outcomes for their residents — and their bottom line. Armed with a thorough understanding of the facility's unique needs, the consultant is able to provide a tailored program that encompasses the educational, regulatory and cost-containment concerns of the facility while assuring appropriate medication therapy for each resident.

Monitoring medication management

To make things easier for you, we offer in-pharmacy automation. This state-of-the-art system offers another level of patient safety by dispensing medications more accurately and reducing time spent on correcting errors, helping your community avoid risk — all helping to keep your community's residents safer.

Infusion therapy support

Infusion medications for long-term care residents are prescribed every day. But with our support, you can both admit and care for clinically complex residents safely and effectively because we'll train and certify your facility staff. Our comprehensive Infusion Therapy Program offers several ways to help avoid risk:

- State-of-the-art stationary and ambulatory electronic infusion devices are provided as appropriate for each therapy
- Our Nurses' Infusion Therapy Procedure Manual for your facility is a ready reference for staff
- Infusion therapy skills validation tools enable your facility administrators to confirm staff competencies
- Hybrid eLearning Program for staff to learn at their own pace
- Infusion therapy physician order sheets and medication administration records promote accuracy and simplify complex infusion orders

Staff education

In order to advance staff knowledge and help reduce risk in your community, we provide extensive educational tools and resources. These tools, among our other offerings, are designed to mitigate risk, which in turn will help your facility thrive.

Nurse consultants

Our dedicated team of field nurses consult with community staff and provide education, as well as support through state testing requirements and regulations. And in 2018 alone, our nurse consultants conducted more than 480 nurse audits in assisted living communities.

- Improving the quality of care, safety and health of residents
- Providing survey preparation and support
- Enhancing staff capability through comprehensive clinical education programs
